Easy  Topics  Companies

[SQL Schema](#) > [Pandas Schema](#) >

Table: Project

Column Name	Type	
project_id	int	
employee_id	int	

(project_id, employee_id) is the primary key (combination of columns with unique values) of this table.

employee_id is a foreign key (reference column) to Employee table.

Each row of this table indicates that the employee with employee_id is working on the project with project_id.

Table: Employee

Column Name	Type	
employee_id	int	
name	varchar	
experience_years	int	

employee_id is the primary key (column with unique values) of this table.

Each row of this table contains information about one employee.

Write a solution to report all the **projects** that have the most employees.

Return the result table in **any order**.

The result format is in the following example.

Example 1:

Input:

Project table:

project_id	employee_id
1	1
1	2
1	3
2	1
2	4

Employee table:

employee_id	name	experience_years
1	Khaled	3
2	Ali	2
3	John	1
4	Doe	2

Output:

project_id
1

Explanation: The first project has 3 employees while the second one has 2.
