

267. Palindrome Permutation II Premium

Medium Topics Companies Hint

Given a string *s*, return *all the palindromic permutations (without duplicates)* of it.

You may return the answer in **any order**. If *s* has no palindromic permutation, return an empty list.

Example 1:

Input: *s* = "aabb"
Output: ["abba", "baab"]

Example 2:

Input: *s* = "abc"
Output: []

Constraints:

- `1 <= s.length <= 16`
- s* consists of only lowercase English letters.

Hint 1

If a palindromic permutation exists, we just need to generate the first half of the string.

Hint 2

To generate all distinct permutations of a (half of) string, use a similar approach from: [Permutations II](#) or [Next Permutation](#).
