1762. Buildings With an Ocean View

Medium   🏷 Topics   📑 Companies   💡 Hint

There are n buildings in a line. You are given an integer array `heights` of size n that represents the heights of the buildings in the line.

The ocean is to the right of the buildings. A building has an ocean view if the building can see the ocean without obstructions. Formally, a building has an ocean view if all the buildings to its right have a **smaller** height.

Return a list of indices **(0-indexed)** of buildings that have an ocean view, sorted in increasing order.

Example 1:

```
Input: heights = [4,2,3,1]
Output: [0,2,3]
Explanation: Building 1 (0-indexed) does not have an ocean
view because building 2 is taller.
```

Example 2:

```
Input: heights = [4,3,2,1]
Output: [0,1,2,3]
Explanation: All the buildings have an ocean view.
```

Example 3:

```
Input: heights = [1,3,2,4]
Output: [3]
Explanation: Only building 3 has an ocean view.
```

Constraints:

- `1 <= heights.length <= ` 10^5
- `1 <= heights[i] <= ` 10^9

💡 **Hint 1** ⌃

You can traverse the buildings from the nearest to the ocean to the furthest.

💡 **Hint 2** ⌃

Keep with you the maximum to the right while traversing to determine if you can see the ocean or not.
